

Neurological Vision Impairment Division

Hello!

Happy Fall to all. We will be working over the next few months to update our division page and provide more consistent communications as well as some new offerings for discussions and ways to keep updated on all the good work being done out there in the CVI World.

Perkins CVI for the TVI:

What's my ViBe: Visual Behaviours in Autistic Spectrum Disorder

CVI for the TVI is back! View this recorded session with Dr. Rachel Pilling who uncovers the relationship between vision and other sensory processing in individuals with autism. Access more information [here](#). You can pay to earn CEUs. The video and additional materials are available at no cost.

Goals of the presentation:

- Summarize types of ocular visual problems seen in children with ASD
- Introduce two models of visual perception in ASD
- Explore a new way of thinking about a child's visual needs
- Understand the role of ViBe8 in eliciting visual behaviours in children with ASD
- Aware of the uncertain interaction between diagnoses of ocular visual impairment, cerebral visual impairment and ASD

Salus University Neurological Visual Impairment CE Course.

[Register](#) now for Salus' Neurological Visual Impairment in Children Eight-week course for practicing educators and orientation and mobility specialists serving children with NVI and their families. Participants may earn a CEU certificate, 25 ACVREP points, and those with VI certification can earn a Digital Badge. Class starts February 4th, 2023. You can listen to [this](#) Department of Blindness and Low Vision Studies (BLVS) podcast featuring Salus program leaders and Adjunct Faculty, to learn more about about the course.
